PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine substrate(s) to which Organic Blocks™ will be applied:
   1. Components must be clean, dry, and free of contaminants that would interfere with adhesive bond.
   2. Drywall or other wall substrate will need ‘priming’ (or sealing) to ensure suitable bond with contact cement

B. Verify that HVAC system is operating and maintaining occupancy level temperature and humidity conditions.

C. If either of the above needs attendance, coordinate with responsible entity to correct unsatisfactory conditions.

3.02 PREPARATION

A. Acclimatization: Open all Organic Blocks™ packaging to allow the material to acclimate for a minimum of 3 days prior to the start of the installation.

B. Fix substrate if needed (as per Examination needs and those relating to the adhesive bond per the instructions of the adhesive selected for use).

3.03 INSTALLATION

A. Find Center: using a chalk line, find the symmetrical axes of the wall sides to determine starting point. Measure from the middle to ensure that the edge pieces (those against the adjacent walls) are identical in size and greater than 2” in width.

B. Follow the Manufacturer’s installation instructions of the adhesive selected.

C. Install in pattern suitable based on specification plans.

D. Press tiles into place (per adhesive Manufacturer’s instructions and dry time requirements)

3.04 CLEANING and MAINTENANCE

A. Clean and maintain in accordance with guidelines presented in Installation Guidelines.
